---

Sounds good on the inspection last week. I am pretty open the week of July 9th except for Tuesday with meeting scattered through the day, and I don't work on Fridays. The week of July 23rd I will be at an ITRC meeting all week.

I thought I had already reviewed the soil management plan and was a little surprised to be contacted by Kleinfelder asking what to do about disposal of IDW from the Port's investigation at the site. I have a big stack of Reynolds documents and the soil plan should be in there and I will try to get to it this week.

I still have the letter agreement for NRDA open so have a mechanism to capture all of that time.

Mavis

No supprises from the inspection last Monday. Tthe site looks good overall - they have completed most of the maintenance issues re: groundwater leking into the stormwater runoff/drainage system connections to the City storm line on front avenue. They still have one small section that needs to be slip-lined and they expect to have that done within the month.

I was going to try to target the week of July 9th or 23rd for the 5 year review. Are you available either of those weeks?

A couple of other items -

- CMMP - have you reviewed the contaminated media management plan? I have looked it over and am generally OK, but wanted to see if you have any comments. My main issue was making sure that it, and the other appropriate institutional controls. applies to the area of South Wetlands that is not currently owned by Alcoa.

- Are you planning to recover your costs, including settlement of NRDA costs, through your separate agreement with Alcoa? There is language in the draft CD that Alcoa expects it to settle "any and all claims" for NRDA, so wanted to make sure your costs were being captured correctly.

Chip

RE: 2nd Quarter 2007 Gould Site  
Inspection

How did the site visit go Monday? Sorry, but I had a conflict that could not be resolved.

Have you decided on a date for the 5-year review? I would like to get that on my calendar as soon as possible.

I also wanted to let you know that I was contacted by a reporter named Elizabeth Piet from Scranton PA asking about the NL Gould site remedy. Apparently, this site has a sister site near Scranton where a NL Gould site has proposed an on site containment facility and the site is in a residential area so the neighbors are upset. I talked with her about the site a little and also gave her your name and number since you can give her a little more detail on the construction and performance than I can.

Kasey

Thanks for the notice. Can you let us know what time you're planning to start?

Also, you should be aware that EPA will be conducting a 5-year review of the Gould Site this summer, which will include an on-site inspection that will need to be scheduled as well. The timing is a little tight to try to tag onto the inspection planned for next Monday, so I'd be open to discussing whether it makes sense to do two inspections (the quarterly and the 5-year review) or trying to combine them later in the month. Let me know if you'd like to look at that option.

Thanks

---	---

The 2nd Quarter 2007 Gould Site Inspection is scheduled for Monday, June 18, 2007.

As discussed in the 1st Quarter 2007 Inspection Report, the following tasks will be completed in addition to the OCF inspection:  
Water observed in the leak detection sump near MH-2 will be transferred to the frac tank in accordance with the Operation and Maintenance Plan, Gould Superfund Site prepared by Advanced Geoservices Corp. (AGC, 2001).  
A sample of the liquid in the leak detection sump will be collected and submitted for laboratory analysis of total and dissolved lead, in conjunction with second quarter groundwater samples, to attempt to identify the source of the water.  
The minor cracking observed in IB-1 will be monitored to ensure that no additional deterioration occurs.

Please let me know if you have any questions.

Thank you,

Kasey Hersey
